2 Introductory Econometrics for Finance by Chris Brooks indicate a good fit. This looks like a classic example of what we term near multicollinearity. This is where the individual regressors are very closely related, so that it becomes difficult to disentangle the effect of each individual variable upon the dependent variable.

Introductory Econometrics for Finance Chris Brooks - StuDocu

Introductory Econometrics for Finance Chris Brooks Solutions to Review - Chapter 3 1. (a) The use of vertical rather than horizontal distances relates to the idea that the explanatory variable,  $x$ , is fixed in repeated samples, so what the model tries to do is to fit the most appropriate value of  $y$  using the model for a given value of  $x$ .
