Pediatric Emergency Care  
Abstract: Pediatric rapid sequence intubation is a skill of great importance to emergency medicine physicians. Developing a systematic strategy for approaching an emergent airway aids in the proper handling of this event. This paper is a review of the current recommendations for pediatric rapid sequence intubation including current medications and surgical rescue techniques.

Halden Scott | Children's Hospital Colorado  
Background: Rapid Sequence Intubation (RSI) is the standard definitive airway management in the pediatric emergency department (PED). There are limited data describing time to intubation (TTI), adverse events (AE), and process variation for RSI in the PED. Prior studies demonstrate the first pass intubation success rate (FPISR) is between 26-85% and, the RSI-associated AE rate is between 20-61 ...
